

Guide's - Intro

This guide's will show you how to use **msaSDK** with most of its features.

Install msaSDK

The first step is to install FastAPI.

For the tutorial, you might want to install it with all the optional dependencies and features:

```
$ pip install -U msaSDK
```

```
---> 100%
```

...that also includes `uvicorn`, that you can use as the server that runs your code.

Inherited from FastAPI

msaSdk and specifically MSAApp is inherited and build from and with FastAPI. The 'msaapi' is just bringing together some stuff to integrate some other libraries.
