msaSDK Module

.service

Main Service Module for MSAApp.

Initialize with a MSAServiceDefintion Instance to control the features and functions of the MSAApp.

Attributes

```
__version__ (module-attribute)
```

```
__version__ = '0.1.1'
```

str: Module Version

password_helper module-attribute

```
password_helper = PasswordHelper(security_context)
```

Password Helper Instance

security [module-attribute]

```
security = getMSASecurity()
```

MSASecurity instance

$security_context \ {\tiny \texttt{module-attribute}}$

```
security_context = CryptContext(
    schemes=["bcrypt"], deprecated="auto"
)
```

Security Context for Password Helper

Classes

MSAApp

Bases: MSAFastAPI

Creates an application msaSDK instance.

As with FastApi the MSAApp provides two events: startup: A list of callables to run on application startup. Startup handler callables do not take any arguments, and may be be either standard functions, or async functions. shutdown: A list of callables to run on application shutdown. Shutdown handler callables do not take any arguments, and may be be either standard functions, or async functions. Those are also used internally, which are triggered before the external events.

Do not include the self parameter in the Args section.

PARAMETER	DESCRIPTION		
settings	MSAServiceDefinition (Must be provided), inst all settings	ance of a service definition with	
	TYPE: MSAServiceDefinition		
timers	MSATimers instance Default None, provide a MSATimers instance and it will start the scheduler internaly		
	TYPE: MSATimers	DEFAULT: None	
sql_models	•	Model Default None, provide list of your SQLModel Classes and the n create CRUD API and if site is enabled also UI for CRUD	
	TYPE: List[SQLModel]	DEFAULT: None	
auto_mount_site	Default True, if site is enabled in settings and internal startup event.	this is true, mounts the site in	
	TYPE: bool	DEFAULT: True	

ATTRIBUTE	DESCRIPTION	
logger	loguru logger instance	

ATTRIBUTE	DESCRIPTION
auto_mount_site	bool auto_mount_site TYPE: bool
settings	MSAServiceDefinition settings instance.
timers	MSATimers = timers TYPE: MSATimers
healthdefinition	MSAHealthDefinition settings.healthdefinition TYPE: MSAHealthDefinition
limiter	Limiter = None TYPE: Limiter
db_engine	AsyncEngine = Db Engine instance TYPE: AsyncEngine
sql_models	List[SQLModel] = sql_models TYPE: List[SQLModel]
sql_cruds	List[MSASQLModelCrud] = [] TYPE: List[MSASQLModelCrud]
scheduler	MSAScheduler = None TYPE: MSAScheduler
site	AdminSite Admin/Auth Site instance.
scheduler_task	The Task instance that runs the Scheduler in the Background TYPE: Task
ROOTPATH	str os.path.join(os.path.dirname(file))

Attributes

Base instance-attribute

Base: DeclarativeMeta = declarative_base()

```
ROOTPATH [instance-attribute]
  ROOTPATH = os.path.join(os.path.dirname(__file__))

  auto_mount_site: bool = auto_mount_site
db_engine instance-attribute
  db_engine: AsyncEngine = None
graphql_app [instance-attribute]
  graphql_app: GraphQLRouter = None
graphql_schema (instance-attribute)
  graphql_schema: schema = None
healthcheck [instance-attribute]
  healthcheck: health.MSAHealthCheck = None
health definition {\tiny \underbrace{\tt instance-attribute}}
  healthdefinition: MSAHealthDefinition = (
       self.settings.healthdefinition
  )
limiter [instance-attribute]
  limiter: Limiter = None
logger instance-attribute
  logger = logger
scheduler instance-attribute
```

```
scheduler: MSAScheduler = None
scheduler_task instance-attribute
  scheduler_task: Task = None
Settings [instance-attribute]
  settings = settings
site instance-attribute
  site = None
SQI_Cruds [instance-attribute]
  sql_cruds: List[MSASQLModelCrud] = []
sql\_models {\tiny \underbrace{\tt instance-attribute}}
  sql_models: List[SQLModel] = sql_models
templates [instance-attribute]
  templates = Jinja2Templates(
       directory=self.settings.templates_dir
timers [instance-attribute]
  timers: MSATimers = timers
Functions
__init__
  __init__(
       settings: MSAServiceDefinition,
      timers: MSATimers = None,
       sql_models: List[SQLModel] = None,
       auto_mount_site: bool = True,
       *args,
```

```
**kwargs
  ) -> None
get_healthcheck async
  get_healthcheck(request: Request) -> ORJSONResponse
    Get Healthcheck Status
get_scheduler_status (async)
  get_scheduler_status(
     request: Request,
  ) -> MSASchedulerStatus
    Get Service Status Info
get_services_definition
  get_services_definition(
     request: Request,
  ) -> MSAServiceDefinition
    Get Service Definition Info
get_services_openapi_info
  get_services_openapi_info(
     request: Request,
  ) -> MSAOpenAPIInfo
   Get Service OpenAPI Info
get_services_openapi_schema
  {\tt get\_services\_openapi\_schema}(
     request: Request,
  ) -> ORJSONResponse
    Get Service OpenAPI Schema
get_services_settings
  get_services_settings(request: Request) -> ORJSONResponse
```

Get Service OpenAPI Schema

```
get_services_status async
```

```
get_services_status(request: Request) -> MSAServiceStatus
```

Get Service Status Info

index_page

```
index_page(request: Request) -> _TemplateResponse
```

Get Service Index.html Page

monitor (async)

```
monitor(request: Request) -> _TemplateResponse
```

Simple Service Monitor Page. Only works if pages is enabled in MSAServiceDefinition :param request: :return:

monitor_inline async

```
monitor_inline(request: Request) -> _TemplateResponse
```

Simple Monitor Page as Inline without head and body tags. Only works if pages is enabled in MSAServiceDefinition :param request: :return:

mount_site

```
mount_site() -> None
```

msa_exception_handler async

```
msa_exception_handler(request: Request, exc: HTTPException)
```

Handles all HTTPExceptions if enabled with HTML Response or forward error if the code is in the exclude settings list. :param request: :type request: :type exc: :return: :rtype:

msa_exception_handler_disabled async

```
msa_exception_handler_disabled(
    request: Request, exc: HTTPException
) -> JSONResponse
```

Handles all HTTPExceptions if Disabled with JSON Response. :param request: :type request: :param exc: :type exc: :return: :rtype:

profiler

```
profiler(request: Request) -> _TemplateResponse
```

Simple Profiler Page. Only works if pages is enabled in MSAServiceDefinition :param request: return:

shutdown_event [async]

```
shutdown_event() -> None
```

startup_event async

```
startup_event() -> None
```

:return: :rtype:

testpage

```
testpage(request: Request) -> _TemplateResponse
```

Simple Testpage to see if the Micro Service is up and running. Only works if pages is enabled in MSAServiceDefinition :param request: :return:

validation_exception_handler async

```
validation_exception_handler(
    request: Request, exc: RequestValidationError
) -> JSONResponse
```

MSAOpenAPIInfo

Bases: SQLModel

MSAOpenAPIInfo Pydantic Response Class

Attributes

name class-attribute

```
name: str = 'msaSDK Service'

Service Name.

tags class-attribute

tags: Optional[List[str]] = None

OpenAPI Tags.

url class-attribute

url: str = '/openapi.json'

OpenAPI URL.

Version class-attribute

version: str = '0.0.0'

API Version.
```

MSASchedulerStatus

timers class-attribute

```
Bases: SQLModel

MSASchedulerStatus Pydantic Response Class

Attributes

message class-attribute

message: Optional[str] = 'None'

Optional Message Text

name class-attribute

name: Optional[str] = 'msaSDK Service'

Service Name.
```

```
timers: Optional[List[MSATimerStatus]] = []
```

Optional MSATimerStatus List

MSAServiceStatus

Bases: SQLModel

MSAServiceStatus Pydantic Response Class

Attributes

healthy class-attribute

```
healthy: Optional[str] = 'None'
```

Health status

message class-attribute

```
message: Optional[str] = 'None'
```

Optional Message Text

name class-attribute

```
name: Optional[str] = 'msaSDK Service'
```

Service Name.

MSATimerStatus

Bases: SQLModel

MSATimerStatus Pydantic Response Class

Attributes

func class-attribute

```
func: Optional[str] = None
```

Timer Handler Function.

mark_HH_MM class-attribute

mark_HH_MM: Optional[str] = None

Mark for Schedule

mode class-attribute

mode: Optional[str] = None

Timer Mode.

Functions

getSecretKey

getSecretKey()

Get Secret Key for Token creation from OS Environment Variable SECRET_KEY_TOKEN

RETURNS	DESCRIPTION
key	The SECRET_KEY_TOKEN.

getSecretKeyCSRF

getSecretKeyCSRF() -> str

Get Secret Key for CSRF Middleware from OS Environment Variable SECRET_KEY_CSRF

RETURNS	DESCRIPTION
key	The SECRET_KEY_CSRF. TYPE: str

getSecretKeySessions

 ${\tt getSecretKeySessions()}$

${\tt Get \ Secret \ Key \ for \ Session \ Middleware \ from \ OS \ Environment \ Variable \ \textbf{SECRET_KEY_SESSIONS}}$

RETURNS	DESCRIPTION
key	The SECRET_KEY_SESSIONS.
